

Features

- Oscillator is provided on the monolithic control with adopting On-Chip-Trimming technology.
- Small temperature characteristics variation by adopting a comparator to compensate for temperature on the control part.
- Low start-up circuit current (100uA max)
- Built-in Active Low-Pass Filter for stabilizing the operation in case of light load
- Avalanche energy guaranteed MOSFET with high VDSS
 - The built-in power MOSFET simplifies the surge absorption circuit since the MOSFET guarantees the avalanche energy.
 - No VDSS de-rating is required.
- Built-in constant voltage drive circuit
- Built-in soft drive circuit
- Built-in low frequency PRC mode ($\approx 20\text{kHz}$)
- Various kinds of protection functions
 - Pulse-by-pulse Overcurrent Protection (OCP)
 - Overvoltage Protection with latch mode (OVP)
 - Thermal Shutdown with latch mode (TSD)

Key Specifications

Type	MOSFET VDSS(V)	RDS(ON) MAX	AC input(V)	Pout(W) Note 1
IRIS-F6454R	650	1. 15 Ω	230 $\pm$ 15%	190
			85 to 264	92

Note 1: The Pout (W) represents the thermal rating at Quasi-Resonant Operation, and the peak power output is obtained by approximately 120 to 140% of the above listed. When the output voltage is low and ON-duty is narrow, the Pout (W) shall become lower than that of above.

Descriptions

IRIS-F6454R is a hybrid IC consists from power MOSFET and a controller IC, designed for Quasi-Resonant (including low frequency PRC) fly-back converter type SMPS (Switching Mode Power Supply) applications. This IC realizes high efficiency, low noise, downsizing and standardizing of a power supply system reducing external components count and simplifying the circuit designs. (Note). PRC is abbreviation of "Pulse Ratio Control" (On-width control with fixed OFF-time).

Absolute Maximum Ratings (Ta=25°C)

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to terminals stated, all currents are defined positive into any lead. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.

Symbol	Definition	Terminals	Max. Ratings	Units	Note
IDpeak	Drain Current *1	3-2	14	A	Single Pulse
IDMAX	Maximum switching current *5	3-2	9.7	A	V ₂₋₅ =0.78V Ta=-20~+125°C

*3 Refer to MOS FET Ta-PD1 curve

*4 Refer to TF-PD2 curve for Control IC (See page 5)

*5 Maximum switching current.

The maximum switching current is the Drain current determined by the drive voltage of the IC and threshold voltage (Vth) of MOS FET. Therefore, in the event that voltage drop occurs between Pin 2 and Pin 5 due to patterning, the maximum switching current decreases as shown by V₂₋₅ in Fig.1. Accordingly please use this device within the decrease value, referring to the derating curve of the maximum switching current.

Recommended operating conditions

Time for input of quasi resonant signals

For the quasi resonant signal inputted to O.C.P/F.B Pin at the time of quasi resonant operation, the signal shall be wider than T_{th(2)}.

Electrical Characteristics (for Control IC)

Electrical characteristics for control part (Ta=25°C, Vin=18V, unless otherwise specified)
